Lara Khoury Ad.E., LL.B. (Sherb.), BCL (Oxon), DPhil (Oxon), Associate Professor, Faculty of Law, McGill University.

Nathalie Vézina B.C.L., LL.B. (McGill), D.E.A. (Strasbourg), Doctorate in Comparative Law (Paris II), Professor, Faculty of Law, University of Sherbrooke.

ABSTRACT: This paper reviews the liability issues surrounding the use of artificial intelligence (AI) as an assistance tool at home and investigates how the Canadian legal framework addresses these issues. It also explores whether an alternative approach to existing liability regimes should be adopted to promote AI innovation based on recognized best practices and, in turn, increase the use of AI technology in healthcare delivery.
